Dear Fellow Texan:

Since this is a book about numbers, it is appropriate to begin this volume with a number -- 3.33. That is the economic multiplier applied to production agriculture as determined by the State Comptroller of Public Accounts.

Every dollar earned by a Texas farmer or rancher adds $3.33 to our economy as it passes from one Texan to another through the free enterprise system. The State Comptroller says the multiplier for agriculture is the state's second largest, meaning that Texas crops and livestock add proportionately more value to the state's economy than most other industries.

In 1988, Texas agricultural producers earned $10.2 billion from the marketing of livestock and food and fiber crops. With the multiplier effect, production agriculture had a total impact of $34 billion on the Texas economy. With the added value gained from processing and wholesale and retail sales, Texas agricultural products account for a total of 21 percent of the Gross State Product.

Texas farmers and ranchers work hard, and their efforts consistently place Texas among the major agricultural regions of the United States and, for that matter, the world. Commercial agriculture is an economic mainstay of most Texas counties, and with producers actively pursuing diversification, we are adding new commodities every year.

The tables in this volume, painstakingly assembled by Texas Department of Agriculture and United States Department of Agriculture employees working together through the Texas Agricultural Statistics Service, tell the story of Texas agriculture and its impact on the lives of everyone in this state.

Those of us at TDA hope that you will find this book a useful source of information. We are happy to make this service available to you.

Best regards,

Jim Hightower

Jim Hightower

Preface

One of the major responsibilities of the Texas Agricultural Statistics Service is to provide a published record of Texas agriculture for the entire agribusiness community.

Beginning with the 1986 special session of the Texas Legislature, funds for the cooperative federal/state program were significantly curtailed for those commodities that were not a part of the mandatory federal county estimates program. District and county estimates which are required under the federal program have been produced, but since 1986, these have only been available on an individual commodity request basis, and no comprehensive annual bulletins were published.

New funding from the 71st Texas Legislature, in addition to special emergency funding for livestock estimates in fiscal year 1989, will allow a limited reinstatement of bulletins for both crops and livestock beginning in 1990.

This publication is designed as a one-time interim bulletin to allow data users to bridge the gap -- to the extent possible -- with all available estimates for the 1986-1988 period.

Early this summer we will publish an annual bulletin covering 1989 crop and 1990 livestock inventory estimates. We will also be updating our historic crop and livestock publications, issued every five years.

We owe a special thanks to all the Texas farmers and ranchers for providing us with the raw data that makes these estimates possible. Service to agriculture continues to be our Number One priority.

Sincerely,

Dennis S. Findley

Economic Indicators

Total Net Income Down During 1988

Net income for Texas farmers and ranchers dropped 4 percent from 1987 to $3.62 billion in 1988, as the increase in total production expenses for the year was slightly higher than the increase in gross farm income.

Texas producers earned a total gross income of $12.93 billion during the year with half of that coming from marketing livestock and livestock products. Total income from farm marketings (crops and livestock) was a record high $10.23 billion.

Government payments to Texas producers dropped 20 percent from the previous year to $1.16 billion, while the total amount earned from other farm income decreased 6 percent to 629.6 million. Other farm income included machine hire and customwork, sales from forest products, recreational income, custom feeding services and other farm-related income.

Production expenses for 1988 totaled $9.31 billion, a gain of 4 percent from a year earlier. The cost of feed rose 32 percent to $1.80 billion, while total seed purchases increased 4 percent to $163.0 million. The total for livestock and poultry purchased during 1988 dropped 12 percent to $1.38 billion.

The total amount Texas producers paid for manufactured inputs rose 11 percent during 1988 to $1.12 billion. Fertilizer and lime costs rose the most, 30 percent more than during 1987. Total cost of pesticides increased 3 percent, fuel and oil, 2 percent, and electricity, 7 percent.

Labor costs increased 4 percent from the previous year to $670.2 million, 7 percent of the total production expenses for Texas producers.

During 1988, off-farm income totaled $5.01 billion, up 11 percent from the previous year and the highest level in five years.

Total Cash Receipts Up 14 Percent

The $10.23 billion that Texas producers earned from crop and livestock marketings increased 14 percent from 1987 fueled by higher prices for most crop commodities during 1988.

Crop cash receipts totaled $3.73 billion, a 28-percent increase from 1987. Total cash receipts for cotton (lint and seed) rose 54 percent to $1.40 billion, 38 percent of the total crop cash receipts for Texas.

The state's farmers earned $288.3 million from the sale of wheat during the year, 28 percent more than they did a year earlier. Corn cash receipts, at $311.3 million, were up 77 percent, while grain sorghum increased 10 percent to $303.0 million.

Lower prices for spring onions helped pull total cash receipts for vegetables down 3 percent from 1987 to $369.9 million. Total receipts from spring onions were $38.6 million, down 44 percent from the previous year.

Sales from greenhouses and nurseries totaled $430 million, 4 percent below a year earlier.

Texas continued to lead the nation in total sales for livestock and livestock products with $6.50 billion, up 7 percent from 1987. Livestock receipts accounted for 64 percent of the total agricultural cash receipts for Texas.

Marketings of live cattle and calves gained 7 percent from the previous year and totaled $4.94 billion, 48 percent of the total agricultural cash receipts.

The sale of dairy products increased 9 percent to $643.25 million. Sales of poultry and eggs were up, but receipts from other livestock products were down, as producers averaged lower prices from the sale of mohair.

TEXAS FARM INCOME INDICATORS, 1984-88

1/ Includes operator dwellings. 2/ Includes forest product sales, recreational income, and other farm business-related income. Estimates for 1982 and later include income from custom feeding services. 3/ Includes machine hire and customwork expenses; marketing, storage, and transportation expenses; and miscellaneous expenses. Definition and data sources for 1978 and later are not directly compatible with those of earlier years. 4/ Includes contract labor expenses, hired labor wages, and Social Security payments. 5/ Uses different data sources among the period before 1979, 1979-83, and 1984 and later. Estimates are not directly compatible among periods. 6/ Excludes operator dwellings. 7/ Cash income less cash expenses and capital consumption. 8/ Gross farm income less rental value of operator dwellings. 9/ Gross receipts of farms less nonfactor payments, interest, contract and hired labor expenses, and net rent to nonoperator landlords. 10/ Includes off-farm income for members of farm operator's family.
